01 **LIVELAB**

'LIVE-LAB : Lighting and Visual Expression Laboratory' is a media research institute launched in March 2013, where experts with over 20 years of field experience gather.

With new technologies and equipment being added every day for performances, "LIVE-LAB continues to make new attempts to combine new technologies, new equipment, and software, and wants to share and create technologies with people in various fields.

02

Distribute

LIVE-LAB strives to discover and introduce excellent domestic and international products related to **media servers, simulation, lighting, interactive systems, and networking.**

We maintain close partnerships with these companies.

LIVE-LAB not only serves as a distribution channel but also provides tailored system solutions for various venues.

We actively conduct education related to these solutions.

02 Distribute L8

The L8 3D Show Platform is software that integrates and visualizes various performance-related fields such as lighting, video (IN/OUT, 3D MAPPING), lasers, special effects, virtual reality, water effects, trusses, video screens, stages, sets, moving objects, and performers, enabling real-time simulation. Light Converge, which provides a highly realistic 3D view, is applicable in theater design and programming, concerts, corporate events, architectural design and projects, sales presentations, educational training, and virtual broadcast studios with multi-camera views.

[FEATURE]

- Direct OEM access to media systems and multi-controls, including bidirectional compatibility with High End's Hog3 and Hog4, Avolites, Grand MA, Hippotizer, CueServer, Pangolin, and Lasergraph DSP.
- Supports lighting control consoles with DMX, Artnet, and sACN.

[TYPE]

- [Software : USB Dongle : Unlimited / Trace / Media / Net-In / Design / Education
- [Hardware : Server] : STUDIO / MAPPING / EDUCATIONAL
- [Hardware : DMX Interface] : Replay-512 / 1536X / 2048X
- [Hardware : etc] : Laser Radar-4 / Oculust Rift / SpacePilot

02 Distribute - Vectorworks

Vectorworks is software that brings designers' visions to life across various fields, including architecture, landscape, and entertainment. It provides optimized workflows and powerful tools and environments to realize designers' ideas. Supporting functions such as design, drafting, 3D, and modeling, it allows designers from different fields to work simultaneously on a single Vectorworks file, maximizing project efficiency.

[VECTORWORKS 2016's NEW FEATURE]

LIVELAB

02 Distribute Luminex

Network Switch

Luminex network switches provide exceptional performance, quality, and reliability ideal for the entertainment industry, offering an excellent solution for network expansion.

[PRODUCT TYPE]

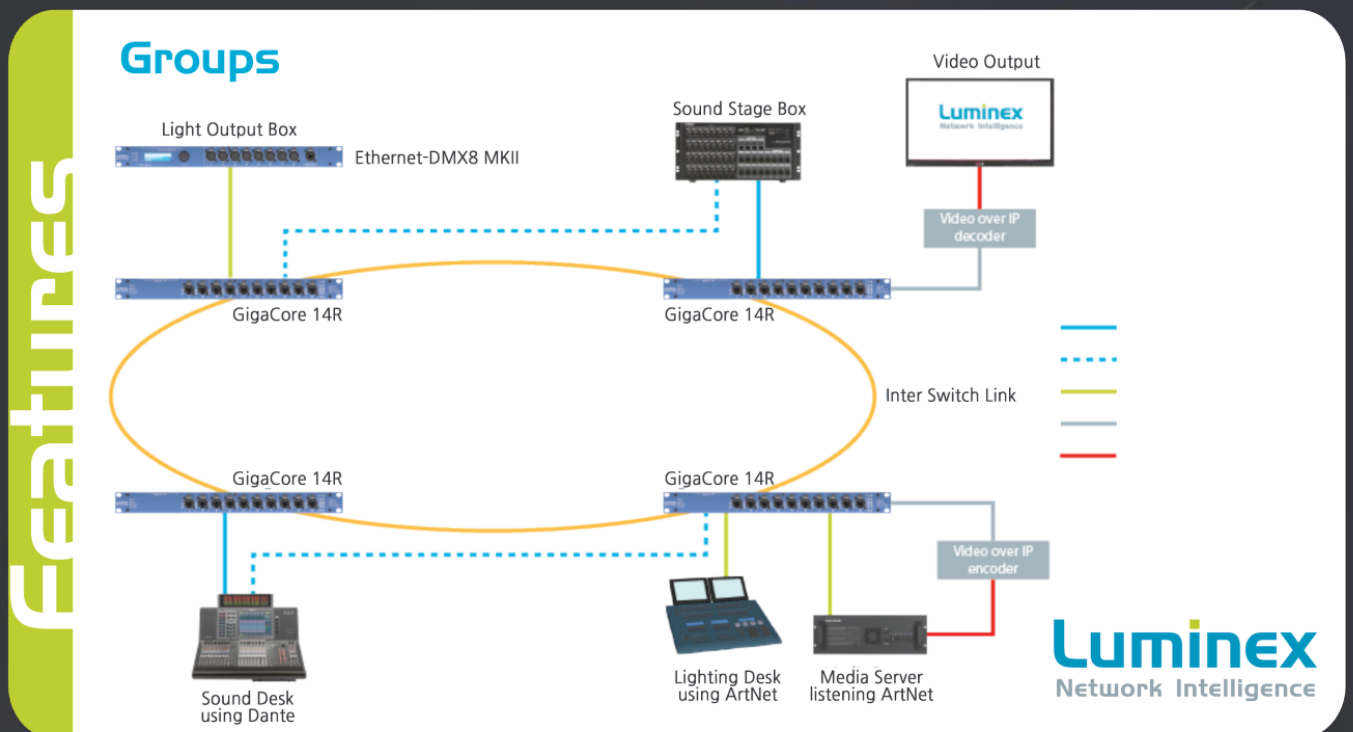

- GigaCore 12
- GigaCore 14R
- GigaCore 16Xt
- GigaCore 16RFO
- GigaCore 26i
- GigaCore 8Truss

Ethernet-DMX Nodes

Luminex **Ethernet DMX Nodes** are cutting-edge DMX network routing devices designed for events. They offer the most extensive routing capabilities, allowing you to configure any network unit you need.

[PRODUCT TYPE]

- Ethernet-DMX8 MK II
- Ethernet-DMX8 MK II /Truss MK II

02 Distribute - Pixmob

PIXMOB is a lighting performance system based on digital infrared broadcasting integrated with wireless control technology. This world-patented technology enables large-scale, dynamic lighting performances using multiple spectators or objects gathered in one place. LIVE-LAB is the exclusive partner selected by PIXMOB in Korea, providing exclusive support for all design, technology, and operations in Korea. Additionally, LIVE-LAB supports technical operations in certain Asian countries, including China and Singapore, excluding Japan.

[FEATURE]

- LED Interactive Device
- Wireless controll
- Colorful Visual Effect

[PRODUCT TYPE]

- PIXMOB PRO

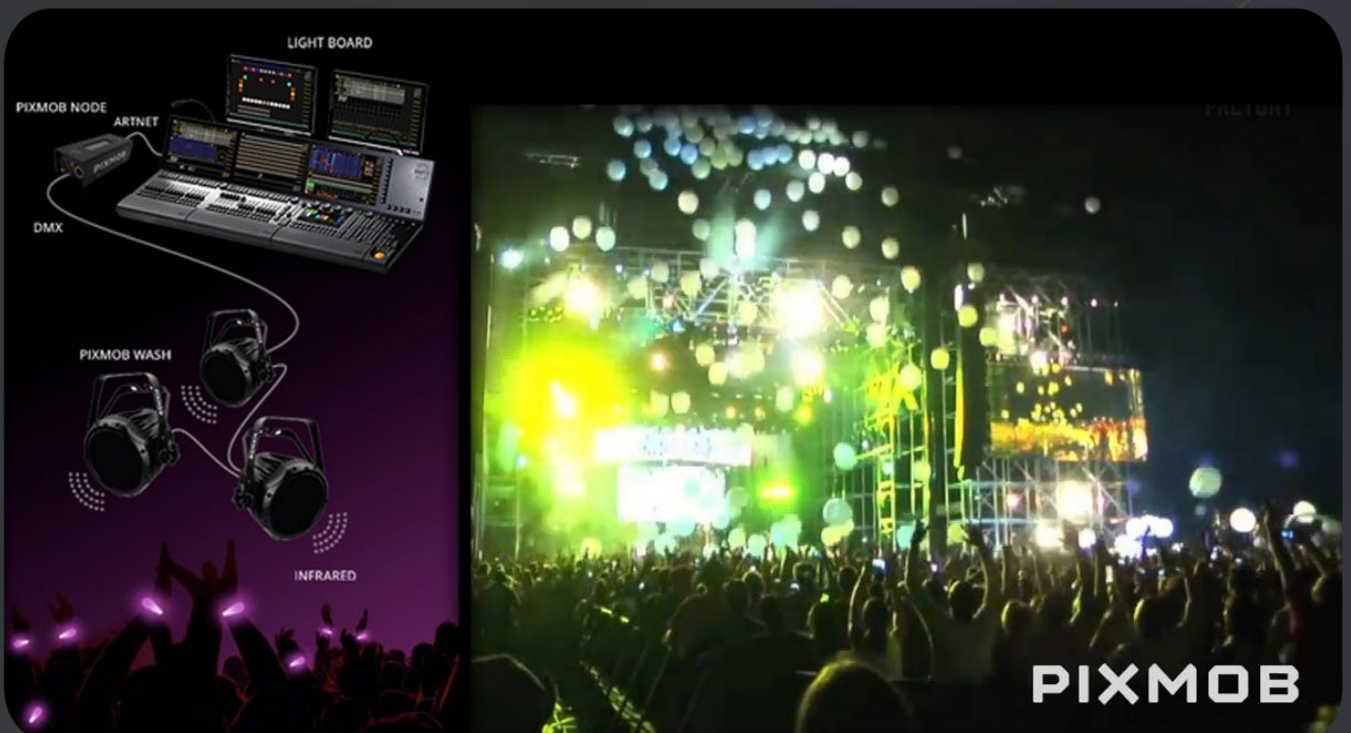

Wristband

Ball

Pendent

PIXMOB

LIVELAB

02 ^{Distribute} Media Server

A media server,

in general, refers to a server used to store and share media. In the entertainment field, media servers are software and hardware technologies specially developed to be suitable for live events, given the increasing use and demand for motion graphics. Currently, media servers are widely used in many performances and events, emerging as an essential core system.

Media servers support various protocols such as 'DMX512-A,' 'ART-NET,' and 'MIDI,' making them easily compatible and integrable with control devices and systems like lighting consoles in live events. These systems that support various protocol signals offer the capability to play video content produced and provided in various formats in real-time. They allow for the immediate transformation, compositing, and application of effects to pre-completed digital sources without rendering, and the results can be instantly output through various output devices. Additionally, depending on the product, it is possible to control video input and output by receiving timecodes on a timeline.

LIVE-LAB

continuously recognizes the importance of media servers and has been researching and using various existing media servers (**Disguise, Arkaos, PIXERA, Madrix, etc.**). By applying media servers to the performances and events they currently manage, LiveLab designs, programs, and operates each project according to its specific characteristics. Additionally, LiveLab explores ways to better utilize these servers by integrating them with various genres (lighting, video, interaction, tracking, etc.) and actively attempts to apply these methods.

03 Performance And Event

In the ever-growing and increasingly complex performance industry, research into new technologies and various experimental attempts are essential.

LIVE-LAB is a team that connects and experiments with different fields in concerts, broadcasts, stage productions, and events. Based on their technical expertise and field experience, LiveLab actively engages in media art planning and production, as well as live production. Their services include comprehensive visual and video design and operation, pre-simulation, lighting, integrated system proposals and design, and programming.

Additionally, **LIVE-LAB**, as experts in virtual studio systems and xR workflows, provides studio consulting, design, and solutions for xR, AR, and VP related systems.

04 TECHNOLOGY DEVELOPMENT AND STUDY

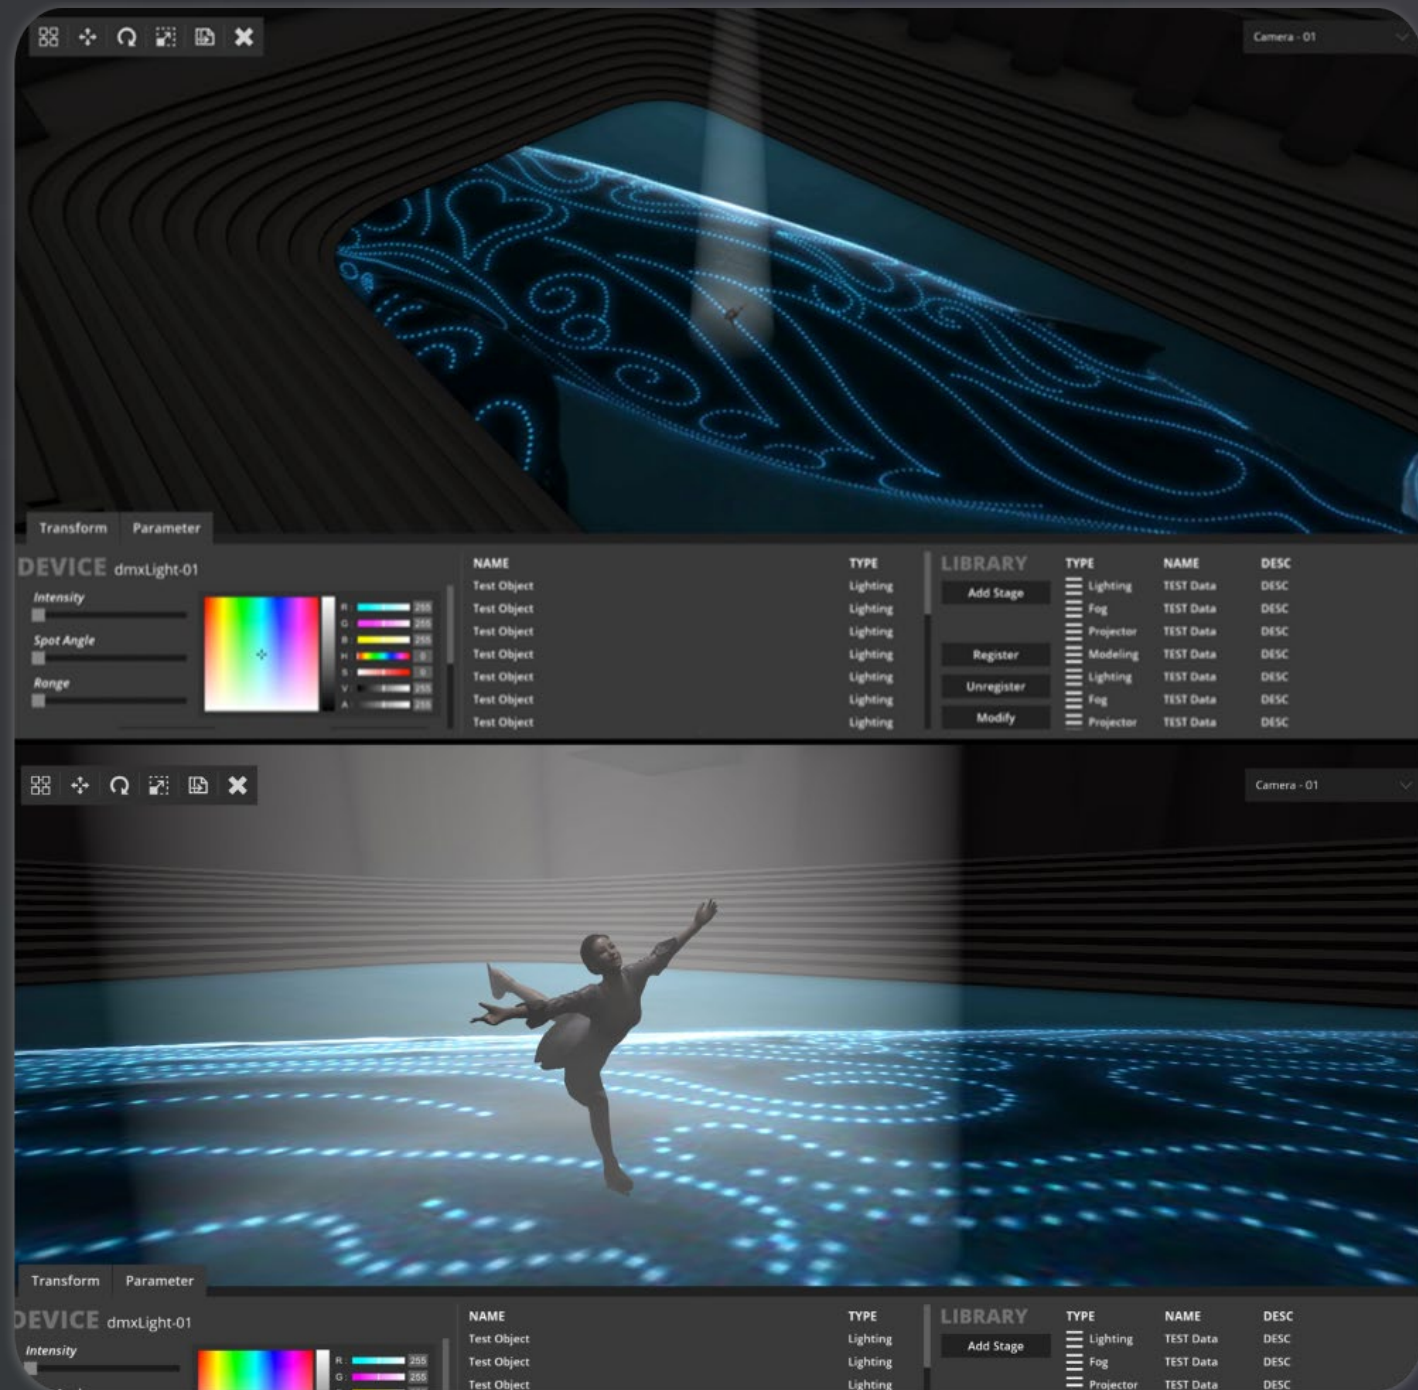

Based on our experience and knowledge, **LIVE-LAB** is actively exploring various ideas for the technological demands of contemporary performance venues.

We participate in numerous projects, either independently or as part of national initiatives, visualizing these ideas and bringing them to fruition.

Additionally, we collaborate with others to address the knowledge needed on-site, offering consulting services for practical implementation.

Pre-Show Simulator

A tool that enables pre-show simulation by placing and controlling stage devices such as lighting fixtures, projectors, etc., in a virtual 3D space.

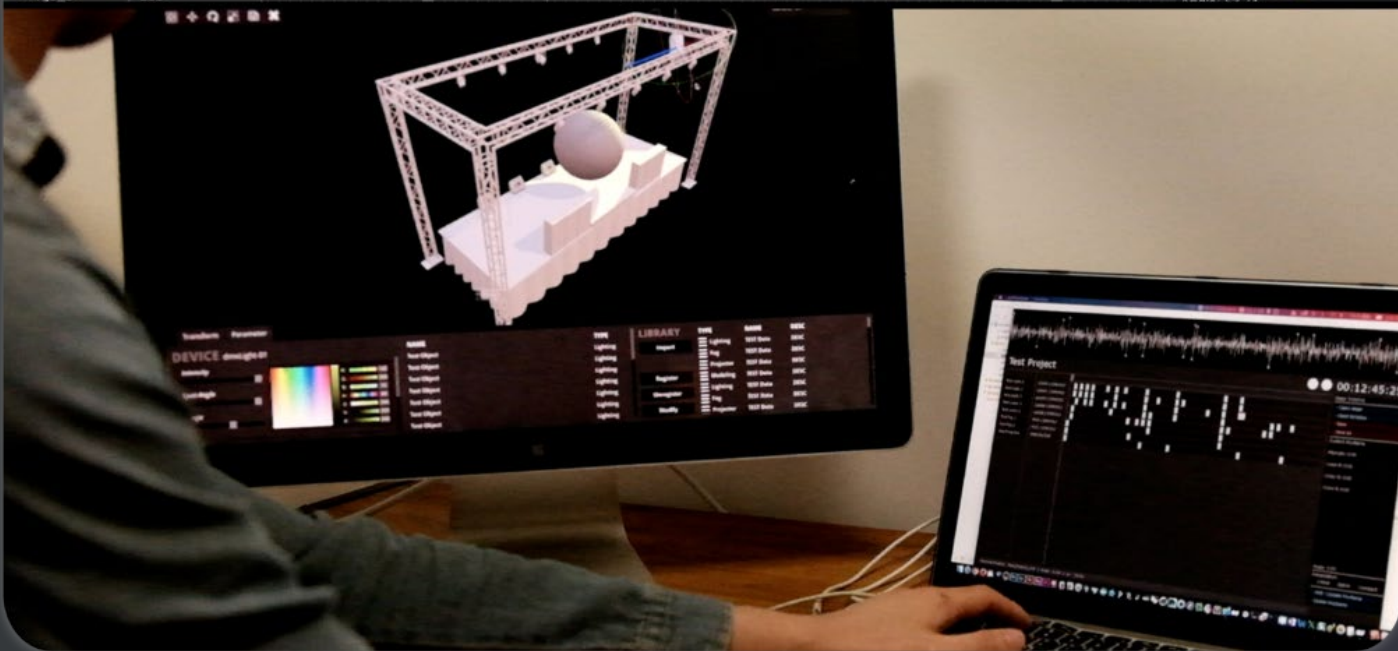

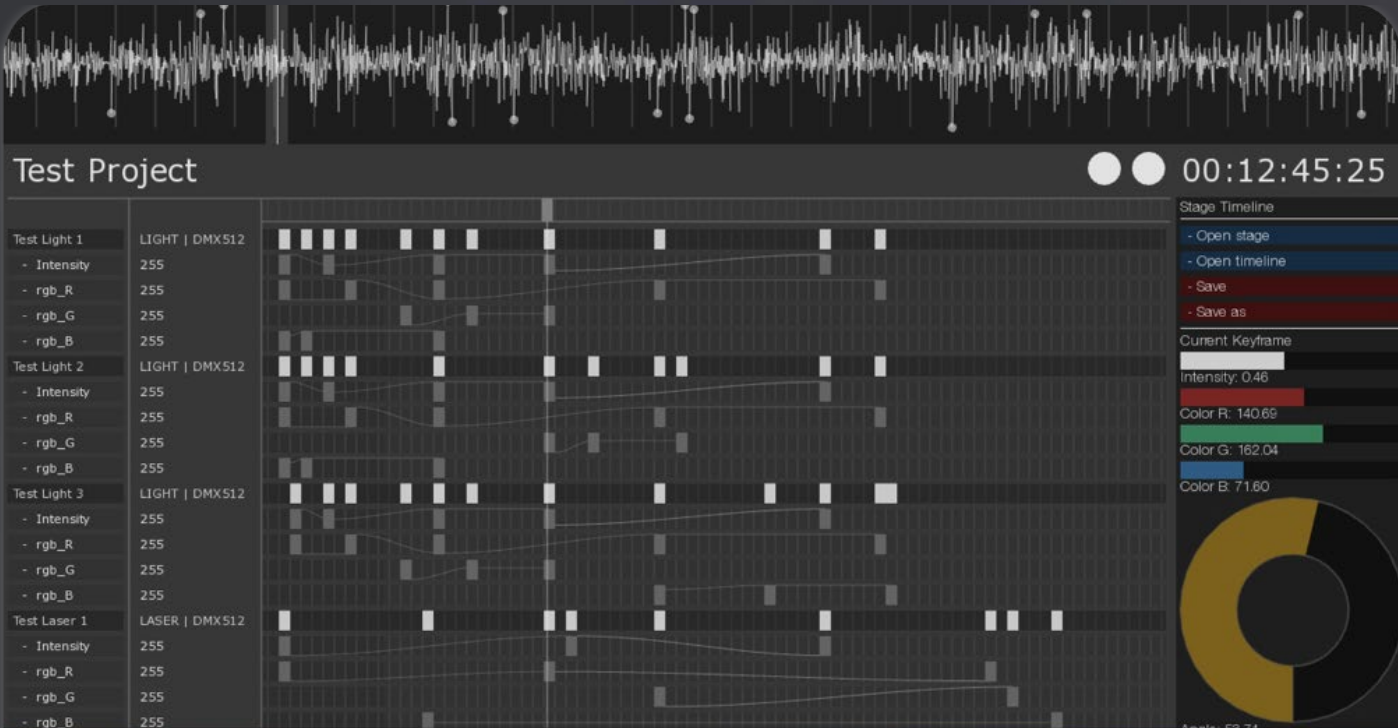

[FEATURE]

- Import of external 3D files (obj, dxf, fbx, 3ds, etc.) for loading stage or prop models and placement functionality
- Stage device library system based on actual stage device information for installing stage devices in a virtual space
- Real-time visualization of lighting effects such as brightness, range, color, etc., using DMX-based control console
- Real-time virtual control through DMX-based control console

Stage Device Control Schedule Editor

A scheduling tool for real-time control and animation of stage devices such as lighting fixtures, projectors, etc., based on a timeline.

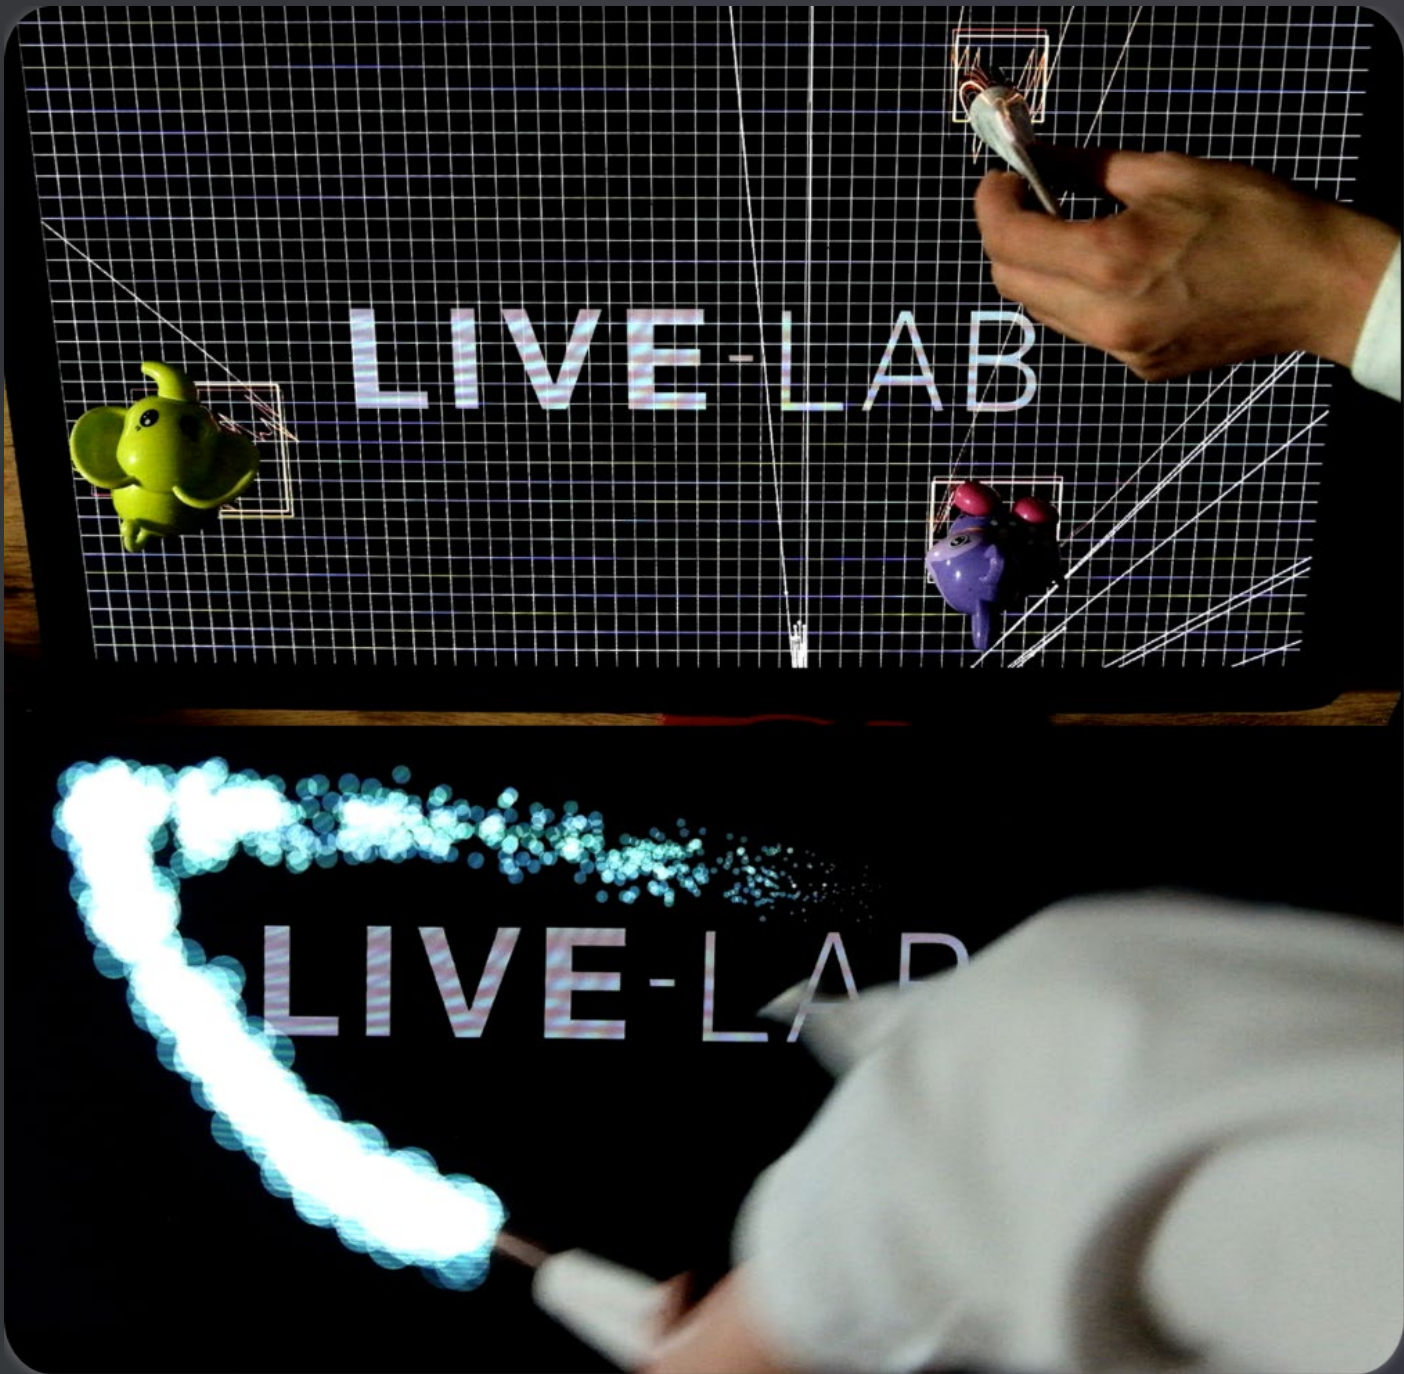

[FEATURE]

- Real-time control of stage devices such as lighting fixtures, lasers, smoke machines, etc., via DMX512 signals
- Real-time control of videos projected by projectors through a dedicated CMS
- Real-time response of actual stage devices when manipulating keyframes and parameters on the interface
- Real-time sound playback for inserting keyframes at appropriate timings, with current playback position displayed on the waveform
- Available in pre-show simulator

Location-Based Effects Generator

A responsive content authoring tool that utilizes multiple laser scanners within a specified area to track positions and apply particle effects accordingly.

[FEATURE]

- Able to track multiple objects within a radius of 60m using a single laser scanner, with the option to expand detection range by increasing the number of laser scanners
- Provides various basic particle effects and offers customization options for color, motion, and shape
- Offers control functionality via OSC for real-time particle control in various ways (e.g., control via smartphone, tablet)
